## The Athlete Health Passport

## A PERMANENT, PORTABLE HEALTH & PERFORMANCE RECORD

The Health Passport is an intuitive app that gives athletes a single place to access and share medical records, tests, referrals and prescriptions in one secure profile. Designed to move with them across clubs, countries, and competitions,

ORB ensures athletes retain full visibility and control over their health records throughout their career. Whether competing internationally or returning home, their medical data travels with them.

ORB for Sport is a medical management system used by sports clinicians, which then gives their athletes access to the Health Passport. ORB for Sport works as a standalone system or will be able to integrate directly with the Athlete Management System as a conduit for high level data. With this app, athletes can access:

- | Their complete health data, one passport available at all times. The athlete is able to share their records and ask external consultants to upload information.
- | Consistent care - no missed details or lost notes, even with frequent moves or team changes.
- | A central record of medications and supplements, allowing the clinician and athlete to monitor what they have taken, creating a central anti-doping profile.
- | Better planning of appointments, referrals, rehab - all coordinated in one platform.
- | Insights through analytical reporting helping to improve long term medical overviews, reduce injury risk, and maximize performance.

# KEY FEATURES & FUNCTIONALITY

## APPOINTMENTS

Streamlined booking system with reminders for physio, scans or sports medicine appointments, syncing across devices and users.

## REFERRALS

Consultation referrals - send referrals for consultations, imaging and more. Receive clinic letter, imaging reports and blood test, directly into the system, helping to keep key information up to date and secure.

Screening referrals - new signing and medical screening tools to capture medical screening in a quick, secure, reportable fashion. Set parameters to alert abnormal or concerning changes in results over time.

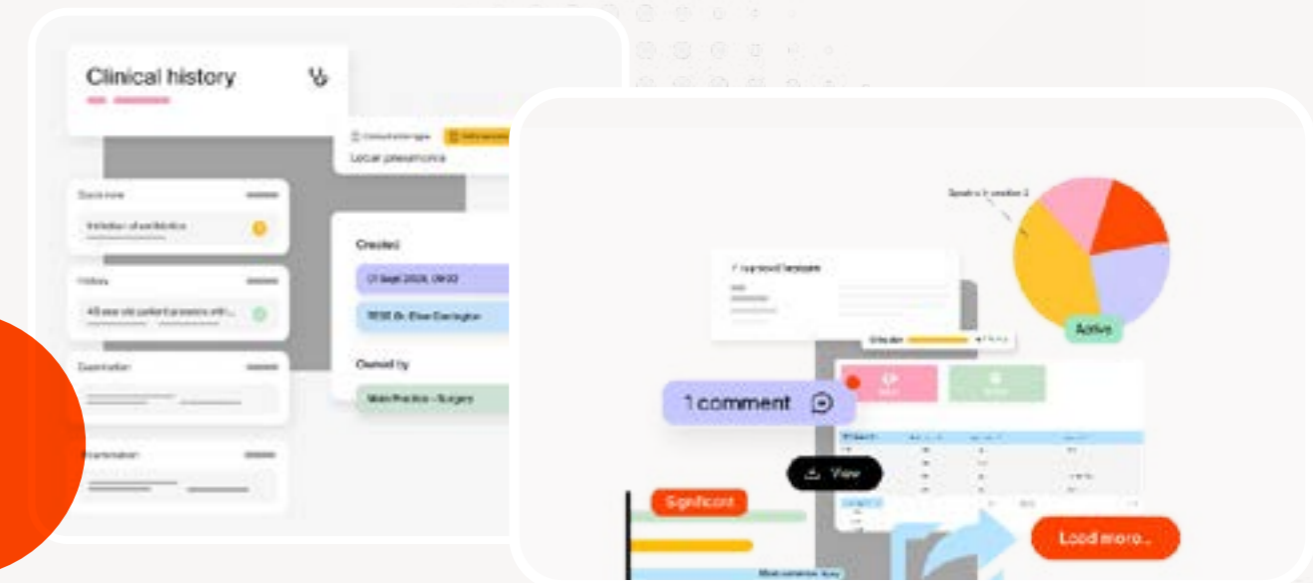

Pre-built mental health concussion tool to track changes in mental and cognitive health.

## DATA MANAGEMENT

Access records of every consultation and treatment (SNOMED-coded), ensuring consistent care whether with a physio, team doctor or dentist.

Athletes can request that medical information is uploaded to the passport from external health care professionals.

The option to add sports specific custom data. Converts logged data into interactive charts and reports, revealing trends in the athlete's health.

# SAFE, COMPLIANT PRESCRIBING

A secure digital prescribing platform integrating SignatureRx with the Global DRO database, facilitating safe prescribing for elite athletes. The 'Quick Script' feature enables rapid prescriptions of medications via mobile devices.

- | Athletes receive prescriptions directly via the app, for speed and convenience.
- | Real-time checks against Global DRO facilitates adherence to anti-doping regulations.
- | Create and store medical files and download into sport specific TUE application forms.
- | Advanced electronic signatures and encryption are used to provide a secure prescribing environment.
- | Full medication history is stored securely in the app, for athletes to share with any clinician treating them.
