

The Most Complete Prescribing
Platform in Elite Sports
Safe. Fast. Compliant.

ORIB

The need for safe, secure prescribing

Prescribing in elite sport has notoriously been challenging, trying to adhere to strict regulations and guidelines whilst providing the flexibility and accessibility within this high-pressure environment.

Medical practitioners must make real time decisions, taking into account multiple factors including anti-doping, previous medication history and allergies.

Often prescribing workflows are fragmented leading to siloed information. What is really needed is a centralised solution that enables fast, simple, compliant prescribing.

ORB Rx is a state-of-the-art, clinician-designed digital prescribing platform for elite sport. It safeguards player health and supports full anti-doping compliance by uniting best in class prescribing information and market leading services in one intuitive, user-driven experience.

ORB Rx complete solution:

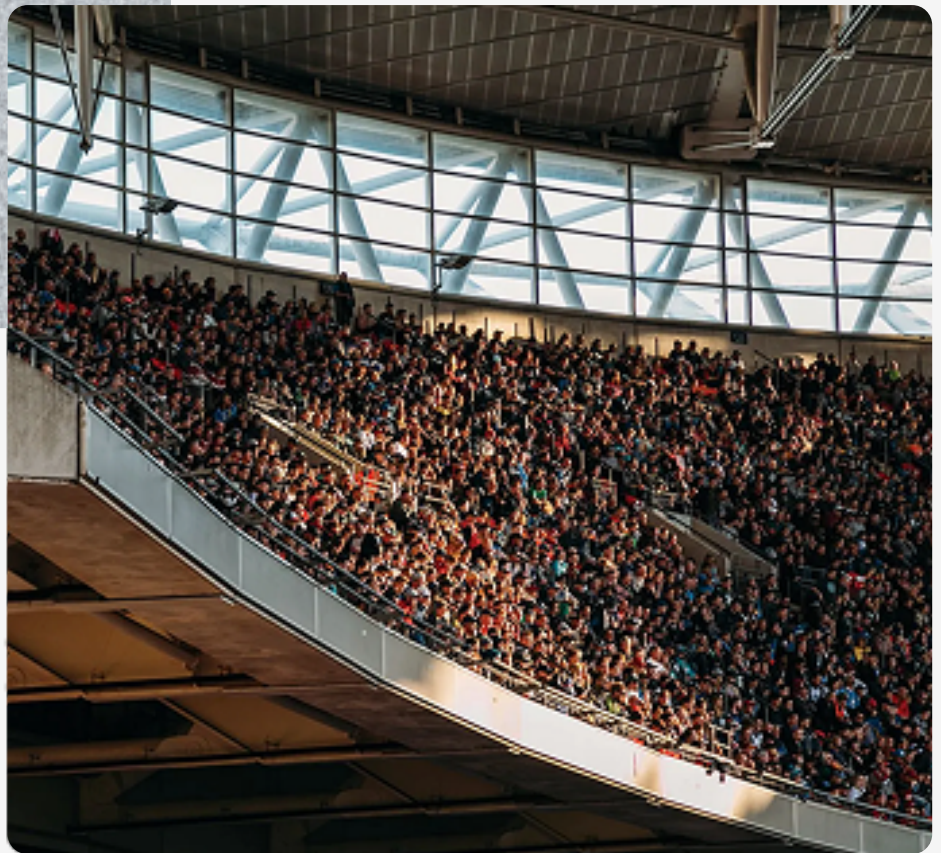

- Digital prescribing to athlete, pharmacy or direct to the door.
- Integrated Global Drug Reference Online (DRO) checks, with reference capture.
- Custom reporting for medicines management at an athlete, squad or organisation level.
- Ability to collate, store & download anti-doping medical files, all in one place.

What that means for you

- Safer, quicker decisions with anti-doping certainty.
- Less admin, fewer delays, more time with athletes.
- A single, trustworthy medication record - wherever you're working.
- Ease of access for TUE applications when required.

Compliant by design

The need to adhere to strict anti-doping regulations and ensuring that prescribed medications comply with the World Anti-Doping Agency (WADA) Prohibited List, is central to the ORB Rx solution.

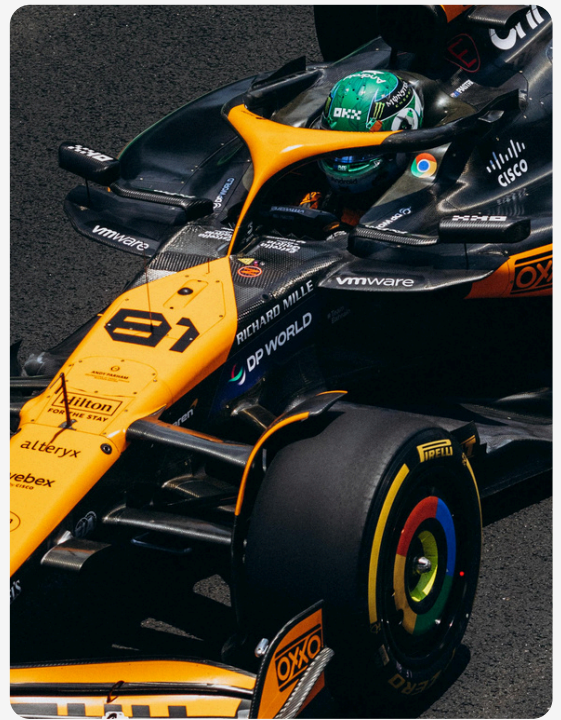

Built-in protection

- ➔ Prescriptions are automatically checked against Global DRO at the point of prescribing and an automatic reference saved to the record.
- ➔ ORB Rx integration with Global DRO ensures that prohibited medicines are always up to date.
- ➔ Real-time warnings are highlighted if a medicine is prohibited or restricted, with in/out of competition status.
- ➔ Complete anti-doping status all in one secure place.

Fast digital prescribing

Our integration with Signature Rx enable advanced electronic signatures and encryption in a secure prescribing environment, delivering speed and convenience.

- ➔ ORB Rx enables doctors to send secure digital prescriptions straight to the athlete, chosen pharmacy or direct to the door.
- ➔ ORB Rx digital prescriptions adhere to industry standards, and are accepted both nationally and internationally.
- ➔ Quick Script speeds up workflows and mobile prescribing. The 'Top meds' function means that selected medicines can be prescribed offline.

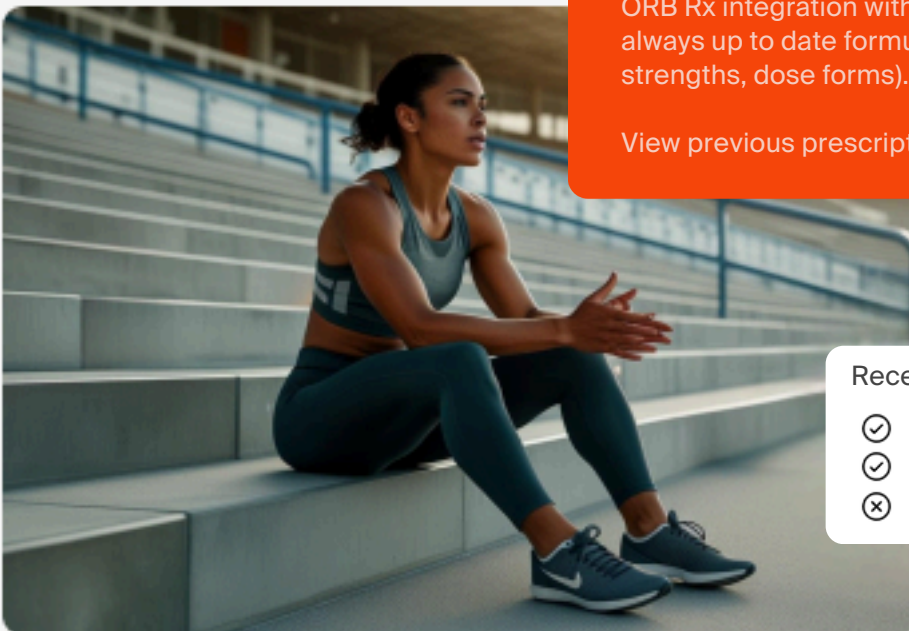

Prescription management

Works on desktop, laptop or mobile with role-based access for doctors and therapists.

ORB Rx integration with the dm+d provides a comprehensive and always up to date formulary with product specifics (pack sizes, strengths, dose forms).

View previous prescriptions, re-prescribe at the click of a button.

Recent Medications

- Paracetamol
- Naproxen
- Betamethasone

Custom reporting for medicines management

Access custom reports via a central dashboard, allowing you to audit and view prescription histories at an athlete, squad and organisation level:

- ➔ Athlete level: provides an instant overview of individual athlete's medication profile.
- ➔ View acute and frequency of medications; have rapid access to anti-doping reports, documentation and storage of TUE's.
- ➔ Team/organisation level: prescribing activity across the squad or organisation
- ➔ Allows rapid access to information for re-ordering stock.

Athlete Health Passport

With ORB Athlete Health Passport athletes can:

- ➔ View prescribed medication and instructions.
- ➔ Check medications against our global anti-doping directory, to check medications even when outside of the UK.
- ➔ Collate, store and download a complete anti-doping medical record in their app.
- ➔ Search Global DRO and Informed Sport databases to check supplements (in development).
- ➔ Request external clinicians to upload prescriptions to the Athlete Health Passport (in development).

Flexible Integration

ORB is built with flexibility at its core. We work closely with you to tailor the right implementation strategy.

Standalone module – ORB Rx can function as a standalone web app alongside existing AMS and medical systems. This enables fast deployment so that you can experience the benefits immediately.

For established relationships and larger organisations, we work closely with customers to tailor the right integration strategy from a light touch Software Development Kit to fully bespoke integration.

Link your existing Signature Rx account with ORB to continue to prescribe digitally and benefit from the other parts of our prescribing package.

Onboarding Package

We provide a digital onboarding portal with videos, templates and a branded page for your programme and all your medical practitioners. Training and support are scaled to organisation size and number of users requiring access.
